

Introducing the ...

MOJO SPRAY REMOTE

The MOJO Spray Remote is a Radio Frequency remote control device designed and engineered to allow you to control your sprayer boom while away from the controls. This allows you to perform pre-spray inspections, tip cleaning and repair without having to return to the controls. We now offer 2 models for your convenience. The original MOJO controls up to 4 boom sections and the new MOJO MAX can control up to 8 boom sections.

The brain child of two farmers, the remote was designed and built by a 22 year auto technician veteran. The remote will allow individual control of separate boom control ball or solenoid type valves. This saves time and money by allowing the operator to control the valves from the ground, at the boom, to clean tips or inspect operation.

Our research has found pre-spray inspection on a 60 ft. boom uses up to 10 gallon of product JUST DOING A WALK AROUND. The MOJO Spray Remote does the same inspection using less than 1 gallon. How many times have you cleaned a tip, return to the controls and turn it on only to find it is still plugged? The MOJO allows you to check it right then and there at the tip. Saves time, money and eliminates those ugly dead spots in our fields.

The MOJO is easy to install, easier to use and works with most control systems and spray monitors. It is a great time saving idea and only \$74.95 plus S&H for the original MOJO and \$120.95 plus S&H for the new MOJO MAX system.

The compact size of the MOJO unit allows for versatility in mounting and long 18" wire leads make installation a snap.

Do you have your MOJO working?

These farmers do.

"I just love my MOJO; I think it is just one of the neatest gadgets out there." Sm. Warren, Indiana
